Investigation

A Consulting Neuropsychiatrist writes: . . . "I would like to express my appreciation of the excellence of your "WALKIE-RECORDALL". As far as I am able to ascertain, it is without a peer. Although the very nature of my profession does not permit me to endorse anything openly, I am sure that you will derive a certain satisfaction from the fact that your item and your service are being appreciated by one of your customers." . . .

A Court Reporting firm in Texas writes: . . . "We enclose our check in the amount of \$..... to cover the purchase of our 5th "WALKIE-RECORDALL" . . .

A Minister writes: . . . "Everywhere I go I try to tell people what a marvelous instrument you make." . . .

The President of a Research Foundation writes: . . . "I am very much impressed with the recorder and its ease of operation combined with its portability and fidelity." . . .

An Investigator writes: . . . "This unit was especially needed for a very secretive investigation with the mike put in an air duct and the recorder some 75 feet away. The Voice-actuated unit also functioned perfectly." . . .

An Investigation Office in Nevada writes: . . . "During the time I was out of Nevada, I owned and operated an Agency in Los Angeles . . . I discussed the WALKIE-RECORDALL with law enforcement officers in California who use your Recorders and they agree that it is the best on the market." . . .

A Fact-Finding Specialist writes: . . . "While broadcasting from WTTM last week, I demonstrated my Miles WALKIE-RECORDALL to Mr., their news editor. He was amazed at my recording of my WOR broadcast of the previous day." . . .

A Scout Master of the Boy Scouts writes: . . . "The Recordall I purchased from you is a terrific machine and I am sure it is the best by far." . . .

A physician writes: . . . "I was very much impressed with the possibilities of your machine. . . . "I found that a friend of mine Dr. . . . from Chicago was also using your equipment and was quite satisfied with same." . . .

A Ph.D. writes: . . . "I constantly sing praises for the 'WALKIE-RECORDALL' everywhere I go." . . .

A Police Chief writes . . . "On October 24, 1952 we purchased a Miles "WALKIE-RECORD-ALL" which we have used with very satisfactory results." . . .

The Department of Motor Vehicles of the State of California writes: . . . "This bureau has used the Miles WALKIE-RECORDALL with great results." . . .

A University Research Associate writes: . . . "We have found that these two machines answer our needs very satisfactorily. Please send us the following accessories." . . .

A Court Reporter writes: . . . "I was amazed at the clarity with which the pocket mike picked up three voices from another room." . . .

A University Supervisor writes: . . . "Your equipment came to our attention as the result of an inquiry to our Police Department here in" . . .

An Anthropologist writes: . . . "I recorded some native tom-toms and shouting 4 miles away. You only claim 60 feet, don't you?" . . .

A Government Agency writes: . . . "Some months ago this Agency purchased a WALKIE-RECORDALL for trial use by appeals referees who travel about the country hearing cases on appeal under theAct. We have found this recorder suitable for our purposes. We now desire three more as well as additional accessories." . . .

A Consulting Engineer writes: . . . "I have used two WALKIE-RECORDALLS for the last 3 years. I have used them every day and have taken one to Europe for 6 weeks of use over there. Almost every company I work with, having seen my machine, has purchased one and is delighted with it." . . .

The 1st Fully Automatic Voice-Actuated Recorder **The Recorder You Use, Does Make The Difference.**

Dear Sirs:

The WALKIE-RECORDALL is an all-purpose, electronic, personal secretary that never is late, never takes coffee breaks, never stays home with a toothache and never asks for a raise. But it can sit on your lap - in a corner of your room - or inconspicuously in a closed briefcase. It can even operate undetected in a locked safe or desk drawer.

You won't believe all the other things it can do until you use it. As a Geiger counter is sensitive only to radioactivity, W-R is sensitive only to the frequency range of the human voice. When used at conferences or round-table discussions, the voices are preserved crystal-clear, while coughing, traffic noise, phone calls, air conditioners and sirens are filtered out or pushed unobtrusively into the background. W-R hardly notices extraneous noises, but let anyone speak - even 60 feet away - and it's a confirmed eavesdropper. It reproduces every word distinctly, near and far, whispered or shouted. An automatic equalizer amplifies low and distant voices, subdues loud ones.

Left unsupervised, W-R with an optional attachment silently turns itself on at the first word spoken in the room or on the phone and turns itself off after the voices stop. Operates in closed briefcase or from remote mike. Thus, it is always alert to collect and store the spoken thoughts, flashes of inspiration and verbal notations. No need to pick up a hand microphone or flick a switch. W-R won't miss a word even if one paces the floor while thinking out loud. The Voice-Actuator may be utilized for 1-man inventory - for dictating and recording conversation while driving without holding a mike or removing hand from wheel to "Start-Stop" the recorder - for recording comments by surgeons and pathologists in operating room. The Voice-Actuator starts and stops the machine and bridges silent periods without one's attention. After 2-1/2 hours or 5 hours of actual utterances, depending on the model of W-R, a thin plastic belt is removed and replaced in two seconds, and the machine is again eager to keep track of conversations, incoming and outgoing phone calls, brain storms and what have you.

A 10-hour Sonaband (5 hrs. each side) costs 29-1/2¢. When perfect permanent recording can be made for under 3¢ an hr., when 5 hrs. of recording (smaller belt) can be mailed 1st class for 5¢, when 500 hrs. of oral reference material can be stored in an 8-1/2 x 1-1/2 x 2 inch box, who would want to use old-fashioned, expensive, space-wasting reels of tape?

A synchronized indexer allows you to locate with instantaneous pin-point precision, from any point to any point on the Sonaband - for playback or for adding subsequent recording, even after replacing the belt. No fumbling. No needless playbacks. In-

See Page 2

formation can be conveniently filed without transcribing and instantly consulted years later, thereby, drastically reducing secretarial costs. But, where written records are desired, Walkie-Recordall's transcribing accessories make the stenographer's work a joy. She can speed up for checking or slow down to suit her typing speed.

The Walkie-Recordall is a vital working tool in every field of industry and profession. Limitless special applications can be cited, such as: lectures, conferences, speeches, court testimony, hearings, statements, depositions, agreements, case histories, inventories, interviews, investigations, research, radio and T.V. programs. Laboratory colleagues can monitor each other or make a joint record of an experiment while actually engaged in it at separate points in a room or in separate rooms.

Doctors, lawyers, social workers, guidance counselors, etc. can compile case histories directly on Sonabands (which hold more data on less area than micro-film), thereby, eliminating typewriter, typist, transcripts subject to typing error, time normally consumed checking for mistakes and correcting them and much valuable office space. They can bring their office facilities right to a client and have instantaneous access by means of a fingertip locator, to any part of any entry in the featherweight files of their "vest-pocket filing cabinet". Sonabands have legal status as evidence since they cannot be altered or accidentally or otherwise erased.

Walkie-Recordall's uncanny selectivity defeats background noise. Its automatic equalizer conquers volume extremes. Its extra-long recording span promotes uninterrupted concentration, creative flow and is adequate to accumulate a running case history. Its long-range pick-up and self-contained power permit unfettered movement without loss of audibility. Subjects who freeze up at the sight of a tape recorder are not intimidated by an innocent-looking briefcase or a concealed mike with long-range sensitivity. Its long-range sensitivity and noise filter make W-R the outstanding recorder for lectures, conferences, round-table discussions and unobtrusive interviews.

For dictation, also, the Walkie-Recordall is unsurpassed for use in extra-noisy places, such as: a factory, train, plane or while driving your car. Hands are free. An optional built-in feature excludes every sound except the voice spoken at close range. You can even whisper. Ultra-light and compact, the battery-operated miniature recorder can be used on-the-spot, anywhere, any time. No wires. Nothing to plug in.

The Walkie-Recordall is used by universities, hospitals, government agencies, industrial organizations, reporters, attorneys and for myriads of scientific and research projects. The Walkie-Recordall was chosen by The American Mt. Everest Expedition for their most difficult task, following extensive tests of the many recorders on the market. On their recent return from their two-month expedition, Dr. Richard Emerson, Ph. D., in the Department of Sociology and Anthropology at the University of Cincinnati, was most happy to report to us that the Walkie-Recordall performed most successfully in their extremely difficult assignment. It stood up exceptionally well under extremes of temperature and poor transportation. So rugged, the Walkie-Recordall withstood the severe beatings against the mountain sides while climbing with the recorder inside the back-pack. He concluded that it more than lived up to their expectations.

While several models are described, Model "CCB" has proven to be our most popular seller. Check items desired on the enclosed order form. Act to-day and don't delay. Walkie-Recordall will become your most valued assistant.

Cordially yours,

J. M. Kuhlik, Sc. D., Director of Sales

NOW

ALL-TRANSISTOR

COMBINATION RECORDER-TRANSCRIBER

The following models are equipped with microphone, built-in battery power, built-in loudspeaker and jack for earphones—ready for immediate use . . . anywhere . . . without wiring or other installation. Same unit records and transcribes. Models "CC" and "LC" may be slung from the shoulder with easy-to-attach shoulder strap (Optional Item "STR")

Sensitivity Range

Models "CC", "CCB", "LC" and "LC4" have a sensitivity range within a radius of 60 ft. from microphone in or out of closed briefcase. Model "LC" is designed for talking close to the microphone, only.

Recording Continuity

Models "CC", "CCB", "LC" & "LC4" have a recording continuity of 3 hours — with a total recording capacity of 6 hours on each Sonaband. Models "CC4" and "CC4B" have a recording continuity of 6 hours with a total recording capacity of 12 hours on each Sonaband.

★ Asterisk indicates items most commonly ordered.

MODEL "LC"

Designed for talking close to the Microphone, only. Recording Continuity, Size, Weight and External Controls: Same as Model "CC". Price: \$350.00

MODEL "CC"

Sensitivity Range: within 60 ft.
Recording Continuity: 2 ½ hours on each side of Sonaband "SC". At slow speed up to 3 hours on each side—a total of 6 hours on a single Sonaband—at a cost of 4¢ per hour.
Size: 4" x 7" x 10"
Weight: 5 lbs. including built-in batteries.
Equipped with carrying handle. Strap "STR" available. Price: \$450.00

★ MODEL "CCB"

Same specifications as for Model "CC" described above but equipped with 16" Miles patented Briefcase for recording in the closed briefcase. May be disconnected from briefcase microphone. Price \$465.75

★ "SC" SONABANDS for Models "LC", "CC" or "CCB"
